Re: Prospective Grant of an NCI Exclusive Patent License: Use of Anti-Mesothelin Immunotoxins for the Treatment of Mesothelin-Expressing Cancers (90 FR 43617)

Dear Dr. Whitney:

Knowledge Ecology International (KEI) would like to offer the following comments regarding the "Prospective Grant of an NCI Exclusive Patent License: Use of Anti-Mesothelin Immunotoxins for the Treatment of Mesothelin-Expressing Cancers" (90 FR 43617) to Lysin Therapeutics, Inc., based in Silver Spring, MD.

There is almost no publicly available information about Lysin Therapeutics, severely limiting the intended utility of the public notice and comment period for an exclusive license. A Google search of "Lysin Therapeutics" returns only results related to the instant proposed exclusive license or technology news about therapeutics involving lysins more broadly. A search of "Lysin Therapeutics" and "Silver Spring" returns only results about this license. A query of the Maryland state Business Entity Search for "Lysin Therapeutics" returns no results. A query of the Delaware Division of Corporations, which is not indicated in the Federal Register notice, but which is where many of these mystery companies that receive exclusive licenses are registered, returns an entry for the company name, but the Registered Agent information listed is a professional business incorporation service.

How can the public be expected to comment on the proposed licensee's ability to bring a product to market and ensure access to patients when there is such a dearth of information - either publicly available or provided by the NIH? In the Federal Register, the NIH should publish basic information about the companies set to receive these inventions on an exclusive basis (i.e. where it is registered, the location of headquarters, size of company, names of principals, date incorporated, etc).

In assessing whether a particular company should receive exclusive rights to a taxpayer-funded invention, the public needs basic information about the company to make that assessment or

render any sort of informed comment. As it stands, by providing simply a name and a location where the company is not even registered as a business, the NIH is hamstringing the public comment period and appears to be simply checking a box rather than truly considering public input.

In any exclusive license, including this one, the NIH should require that the scope of exclusive rights be appropriately limited to that which is reasonably necessary, as required by 35 USC 209, and place safeguards in place to protect the public interest in access and affordability. KEI urges the NIH to include the following license terms in the exclusive license to Lysin Therapeutics.

Access in Developing Countries

The United States Public Health Service Technology Transfer Policy Manual, Chapter No. 300, dated 1/11/2024 states:

PHS seeks to promote commercial development of inventions in a way that provides broad accessibility for developing countries.

One way to implement this policy is to limit the exclusivity to countries with average incomes at least one-third of the United States.

Additionally, NIH should retain a right to grant the WHO, the Medicines Patent Pool, or other governments the right to use the patent rights in procuring the medical technology from competitive suppliers in low- and middle-income countries (LMICs).

A provision in the patent license could allow HHS to exercise this option, following a determination by HHS or the WHO that people in these markets lack sufficient access.

Price Gouging

In any case, US patients should not pay more for the treatment than those in other high income countries, as President Trump highlighted in his recent Executive Order, “Delivering Most-Favored-Nation Prescription Drug Pricing To American Patients.”

Any resultant treatment should be available in the United States at a price that does not exceed the median price in the seven largest economies by GDP that have at least 50 percent of the GNI per capita as the United States, using the World Bank Atlas method.

Companies will enter into agreements with terms on this issue - recently HHS entered into an agreement with Regeneron for a COVID-19 treatment with a reasonable pricing clause, and

similar international reference pricing clauses have been included in contracts with companies such as Sanofi, Moderna, and Pfizer. Attached is an ANNEX on Pricing Clauses in U.S. Government Contracts for COVID-19 Products citing examples of agreements.

Technology Transfer

The license should include a requirement that the licensee provide manufacturing know-how and regulatory marketing and/or data rights to the NIH or any entity designated by the NIH, in the event that the NIH determines that the price in the United States is excessive, and or in order to expand access to treatments in developing countries that do not have sufficient or reasonably priced access.

Transparency

In 2019, the United States endorsed the adoption of the World Health Assembly (WHA) Resolution 72.8, titled “Improving the transparency of markets for medicines, vaccines and other health products.” In this license, the NIH should incorporate, to the extent possible, transparency norms that meet or exceed the standards outlined in WHA72.8. For example, the license should require the reporting of the costs of clinical trials and the amount of any public sector subsidies in the development of the treatment, including those in addition to direct financial payments, such as the U.S. Orphan Drug Tax Credit.

Conclusion

It is critical that the NIH ensures that the terms of this license promote the public interest in the invention and protect patients’ equitable access to the technology, should it come to market. KEI therefore requests that the license incorporates the provisions listed above in order to achieve those goals.

Sincerely,
Claire Cassedy

ANNEX Pricing Clauses in U.S. Government Contracts for COVID-19 Products

In 2020 and 2021, several U.S. government contracts for the development of COVID 19 vaccines, therapeutics, diagnostic tests and other related products included provisions on pricing. Some contracts include a most favored nation pricing clause that specifically requires the company to provide the U.S. government with “a price lower” than the price offered to any centralized federal authority that is “a member of the Group of Seven plus Switzerland.” The non-US members of the G7 are Canada, France, Germany, Italy, Japan, the United Kingdom.
